Foreword	xii	3.7 The influence of fibre structure on leather properties, structure and tear strength	19
Dedications	xiii	3.8 Structure and leather handle	20
Acknowledgements	xv	3.9 Fibre weave and movement	20
Contributors	xvii	References	21
1 The nature and properties of leather <i>Roy Thomson</i>	1	4 The chemistry of tanning materials <i>A.D. Covington</i>	22
References	3	4.1 Introduction	22
2 Collagen: the leathermaking protein <i>B.M. Haines</i>	4	4.2 Vegetable tanning	23
2.1 The collagen molecule	4	4.3 Mineral tanning	27
2.2 Bonding within the molecule	6	4.3.1 Chromium(III) salts	27
2.3 Bonding between molecules	6	4.3.2 Aluminium(III) salts	29
2.3.1 Salt links	6	4.3.3 Titanium(IV) salts	29
2.3.2 Covalent intermolecular bonding	6	4.3.4 Zirconium(IV) salts	30
2.4 Fibril structure	7	4.4 Oil tanning	30
2.5 Shrinkage temperature	8	4.5 Aldehyde tanning	31
References	9	4.5.1 Formaldehyde tanning	31
	10	4.5.2 Glutaraldehyde tanning	31
3 The fibre structure of leather <i>B.M. Haines</i>	11	4.5.3 Oxazolidine tanning	31
3.1 The structure of mammalian skins	12	4.6 Syntans	32
3.2 Variation of structure between animal types	12	4.6.1 Auxiliary syntans	32
3.2.1 Mature cattle skins	12	4.6.2 Combination or retanning syntans	33
3.2.2 Calfskins	14	4.6.3 Replacement syntans	33
3.2.3 Goatskins	14	4.7 Overview	34
3.2.4 Sheepskins	15	References	34
3.2.5 Deerskins	15		
3.2.6 Pigskins	15	5 The mechanisms of deterioration in leather <i>Mary-Lou E. Florian</i>	36
3.3 Grain surface patterns	17	5.1 Introduction	36
3.4 Suede surfaces	17	5.2 Agents of deterioration	37
3.5 Variation in structure with location in the skin	17	5.2.1 Introduction	37
3.6 Directional run of the fibres	19	5.2.2 Acid hydrolysis	38
		5.2.3 Oxidation	38
		5.2.4 Metals and salts	40

5.2.5 Heat	41	7.4.2 Tanning	80
5.2.6 Water	41	7.4.3 Post-tanning	81
5.3 Collagen	43	References	81
5.3.1 Bonds in collagen: sites of deterioration mechanisms	43	8 The social position of leatherworkers	82
5.3.2 Peptides	43	<i>Robert D. Higham</i>	
5.3.3 Amino acids in collagen	44	References	87
5.4 Vegetable tannins	47	9 Gilt leather	88
5.4.1 Introduction	47	<i>Roy Thomson</i>	
5.4.2 Antioxidant ability of tannins	47	9.1 Production and art historical aspects	90
5.4.3 Analysis of tannins in aged leather – deterioration mechanisms	47	9.2 Conservation and restoration	91
5.5 Other chemicals present due to fabrication and use	50	10 Cuir bouilli	94
5.5.1 Introduction	50	<i>Laura Davies</i>	
5.5.2 Fats, oils and waxes	51	10.1 The <i>cuir bouilli</i> technique	94
5.5.3 Sulphur compounds and their acids	51	10.2 Leather moulding techniques	94
5.5.4 Acids in leather due to fabrication or use	52	10.3 The origins of the <i>cuir bouilli</i> technique	94
5.5.5 Perspiration	52	10.4 Changes undergone by the leather in the <i>cuir bouilli</i> process	97
5.6 Denaturation and shrinkage temperatures as a method of assessment for all tannages	52	10.5 Conservation of <i>cuir bouilli</i>	97
5.7 Summary	53	10.5.1 Stability	97
Acknowledgements	54	10.5.2 Damage caused by old treatments	98
References	54	10.5.3 Original treatments of <i>cuir bouilli</i> leather	98
6 Testing leathers and related materials	58	10.6 Case study of the conservation of <i>cuir bouilli</i> leather	98
<i>Roy Thomson</i>		10.6.1 Analysis and use of non-invasive xeroradiographic imaging	99
6.1 Introduction	58	10.6.2 Removal of inappropriate surface coatings	99
6.2 Determination of raw material	58	Endnotes	101
6.3 Determination of tannage type	58	References	101
6.3.1 Ashing test	58		
6.3.2 Spot test	59		
6.3.3 Conclusion	59		
6.4 Determination of degree of deterioration	59	11 The tools and techniques of leatherworking: correct tools + skills = quality	103
6.4.1 Organoleptic examination	59	<i>Caroline Darke</i>	
6.4.2 Chemical tests	60	11.1 Leatherworking tools	103
6.5 Conclusions	64	11.1.1 The awl	103
